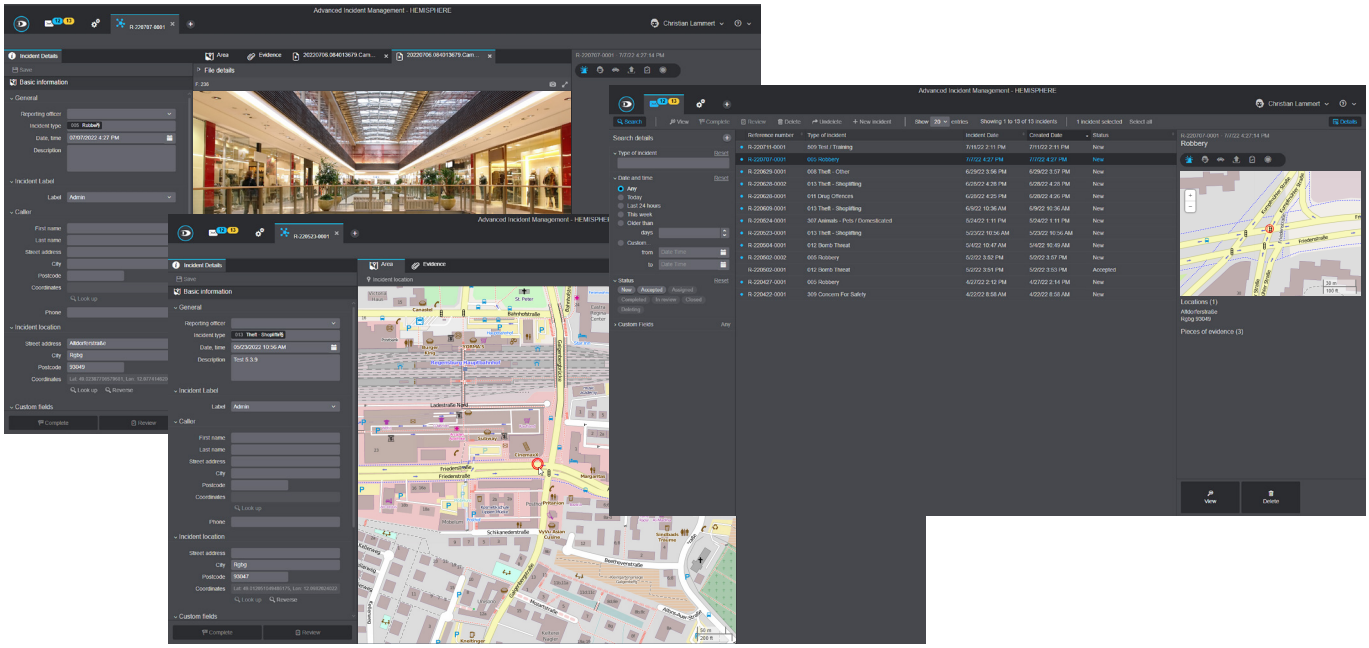
# Advanced Incident Management Module

HEMISPHERE® AIM Module for comprehensive registration, localization, logging and documentation of incidents



## Function
The HEMISPHERE® Advanced Incident Management Module (AIM) allows the registration, localization and logging of incidents. In addition, all information about an incident can be comprehensively documented with text, images, video and audio.

## New Incidents
New incidents can be created automatically by rule-based events or manually by an operator.

## Localization
All incidents will be located. Corresponding map data can be transmitted automatically with the event. Manual position marking on the interactive map is also possible at any time.

## Information Collection
Operators can quickly enter information about an incident manually in input fields. In addition to standards such as personal data, address data and time, further text fields can be defined according to individual requirements.

## Data Archive
Files that contain or log information about an incident can be attached to an incident and stored in an evidence archive. This includes audio and video files, image files, PDF or Word forms.

## Search and Filter Functions
The Incidents overview can be evaluated with different filters (time, status, type) and a full text search. The options can be combined with each other.

## File Export
Files associated with an incident can be exported to external media or burned directly to CD / DVD.

## Backup Link
Backups created with the corresponding application in the SeMSy® Video Management System can be linked to an incident via its identification number.

## Configuration
The HEMISPHERE® Advanced Incident Management Module provides a graphical user interface for configuration and operation, which can be accessed platform independently with a web browser.

## Hardware
The HEMISPHERE® Advanced Incident Management Module is installed and operated on a dedicated server. The optional Server 5 Rack-Mount 2 RU is recommended as hardware platform.

## Licensing
The license for the HEMISPHERE® Advanced Incident Management Module is managed on the HEMISPHERE® Site Dongle.
