# DOMERA®

## Version E

reddot winner 2022

The cameras of the RDF5000DN series offer an economical balance of highest resolution and light sensitivity. Their image sensor has very good light sensitivity and delivers detailed color images even in low light conditions. The combination of the most advanced encoder technology and the sophisticated image processing results in real-time recordings with high resolution at excellent contrast, brilliant clarity and highest color fidelity.

### DOMERA® OS

The cameras are equipped with the hardened Linux operating system DOMERA® OS. In addition to a kernel with long-term support, it offers extensive security functions such as the deactivation of unused ports or the enforcement of strict passwords. In addition, DOMERA® OS supports secure network authentication (IEEE 802.1X) and encrypted data transmission (TLS 1.2/AES-256). All software components are subject to permanent monitoring, maintenance and updating, while the effectiveness of all measures is ensured by regular external penetration tests.

### Video Content Analysis

The integrated Video Content Analysis (VCA) detects movements and objects in the uncompressed image and analyzes them in real-time (depending on the analysis resolution) with highly developed analysis functions such as Intrusion Detection or Line Crossing. The detected events can be used to trigger the recording of a Dallmeier recording system. Together with the detected objects and the corresponding metadata, they are stored in a database. This allows the targeted search and evaluation of the recordings with Dallmeier Client software.

### High Dynamic Range

The camera offers an HDR function for optimal recording of scenes with very bright and dark areas. Each image is captured with two special settings that are combined in real time to create a balanced result. The resulting video stream offers much more detail in both light and dark areas and is visually very close to the human eye's perception.

### Remote Positioning Dome

The camera is equipped with a motor-driven three-axis adjustment<sup>1)</sup> for precise alignment of the lens over the network (RPoD). Remote control is provided by the DOMERA® OS user interface and allows for simple installation and easy adjustment of the captured scene if requirements change. In addition, DOMERA® OS supports the adjustment of zoom, focus and iris of the P-Iris lens over the network. After installation and commissioning of the camera, no further measures are required on site.

### Adaptive IR Illumination

The homogeneous 180° illumination of the IR models is discreetly integrated under the permeable housing cover and can be manually or automatically adapted to the captured scene. Orientation and intensity of the illumination are dynamically determined by the position of the lens and the exposure control. In this way, disturbing side effects such as reflections from white walls next to the detection area can be avoided as far as possible. As a result, the camera delivers clear black and white images with excellent contrast even in seemingly complete darkness.

### Further features

- Video compression H.264, H.265, MJPEG
- Ambient light sensor and removable IR cut filter
- Automatic switching of presets for day and night
- GDPR-compliant functions for data protection and security
- In-ceiling housing UL 2043 "plenum rated" compliant
