ONVIF | S

The MDF5450HD-DN Fisheye is a network camera with fisheye lens specially designed for the image sensor. It offers a **vertical 90° field of view** and thus allows for the acquisition of a **complete half-space with a 360° panoramic view**.

Discrete installation

The MDF5450HD-DN Fisheye consists of an ultra-compact **sensor housing** designed for **discrete installation in suspended ceilings**. In combination with the **separate encoder housing**, it can be **installed even in confined spaces** and operated with an external power supply or with **PoE Class 0**.

8 megapixel resolution

The high resolution of the sensor in combination with state-of-the-art encoder technology and sophisticated image processing enable the **recording of a complete half-space** (half sphere) in excellent quality and with an **8 megapixel resolution** at a **frame rate of up to 25/30 fps**. This makes the camera ideal for applications where detailed **capturing of an entire room** is required, **without blind spots and in real time**.

H.265 Support

The cameras are equipped with encoder technology that supports encoding of the video stream according to the H.265 standard. This allows the **data rate to be reduced by up to 50%** compared to H.264 with the same resolution and image quality. In conjunction with the latest Dallmeier recording systems, a **significant reduction in network and storage utilization** can be achieved.

Dewarped display

The **dewarped display of the live image and recordings** of an MDF5450HD-DN is supported by every workstation in the **SeMSy® Video Management System** with a digital PTZ function. In smaller video security systems, the convenient evaluation with the video management software **SMAVIA Viewing Client** is the ideal option. In addition to a PTZ function, SMAVIA Viewing client supports the **display of a dewarped 360° panoramic view or two 180° views of the half-space**.

Video Content Analysis

The integrated **Video Content Analysis (VCA)** detects **movements and objects** in the uncompressed image and analyzes them in real-time (depending on the analysis resolution) with highly developed analysis functions such as **Intrusion Detection** or **Line Crossing**. The detected **events** can be used to trigger the recording of a **SMAVIA recording system**. Together with the detected objects and the corresponding metadata, they are stored in a database. This allows the targeted search and evaluation of the recordings by **SMAVIA Viewing Client** with the **SmartFinder** function.

AI support

The camera is equipped with encoder technology that enables **Video Content Analysis supported by AI** (Artificial Intelligence) functions **based on neural networks** in the camera. This provides a **significantly more powerful object classification** which finally allows an even more targeted evaluation of the recordings.

EdgeStorage

The camera is equipped with a **RAM memory** that is used by the **EdgeStorage** function to store the video stream in case of a network failure (e.g. Spanning Tree, Bursts). When the network is restored, the **SmartBackfill** function ensures fast transmission to the **SMAVIA recording system**. This stores the video stream with high speed and then continues to record the live stream seamlessly.
