

Panomera® Privacy Shield

Remote controlled shield for simple and recognizable deactivation of image acquisition on a Panomera® S 4/8 with Mountera® Quick-Lock System

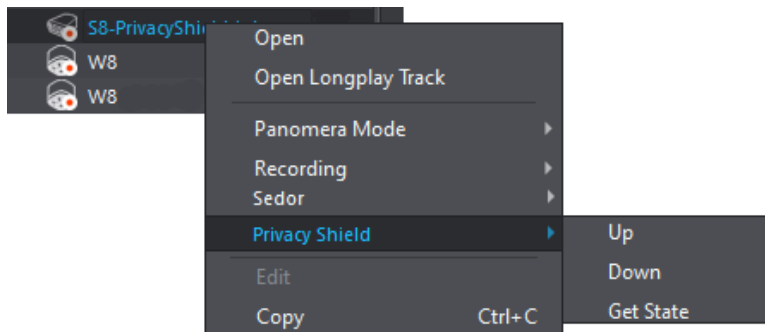

SMAVIA Recording Server as of version 9.7.10 SP D (IPS 10000) supports the control of the Privacy Shield of a Panomera® S4/8 (with Mountera® housing) with the clients HEMISPHERE® SeMSy® Compact and HEMISPHERE® SeMSy® Workstation Software.

During the definition of a Panomera® S4/8 in the **Recording Settings** dialog, the Privacy Shield is automatically detected after a click on **Test / Assign**. The corresponding **Privacy Shield (internal)** check box is activated automatically. Further settings are not required.

The Privacy Shield is controlled with the clients HEMISPHERE® SeMSy® Compact (in the following image) and HEMISPHERE® SeMSy® Workstation Software using the context menu of Panomera® in the camera tree.

Please note that on some Panomera® models, the overview module is integrated in the lower lens row. When the Privacy Shield is lowered, it takes a few seconds to reach the corresponding position. Accordingly, the Privacy Shield is only visible after a certain delay when the overview module is displayed in a split.
