

# DMVC 2 Server

Server software for connecting Dallmeier recording systems to the Internet, licenses for one recording system and five clients (DMVC 2 Apps) included

DMVC 2 is a server software for the connection of Dallmeier recording systems to the Internet. With DMVC 2, the entire local video network can be accessed via a common external IP address. All live images and recordings can be accessed via the mobile network or WiFi using the DMVC 2 App smartphone application. Special transcoding optimizes the video data for display on the mobile device while simultaneously ensuring a high frame rate.

The Dallmeier Mobile Video Center app is available free of charge in the iTunes App Store oder on Google Play.

The DMVC 2 server software can be installed and operated on an office PC with current standard hardware. The integrated graphical user interface allows quick and easy configuration. In addition to user administration, the use of the Client Whitelist function guarantees personalized access to the connected Dallmeier recording systems protected against misuse. Furthermore, the optional camera management allows a combination of various cameras to form virtual recording systems.

## Features

- Licenses for the access of five clients (DMVC 2 Apps) included
- License for the connection of a recording system included
- Licenses for up to 32 clients and 16 recording systems optional
- Routing function with a common IP address to an external network
