

SeMSy® Interface for Access Controls

Overview of the supported Access Control systems that can be connected to a HEMISPHERE® SeMSy® Security and Business Management System

The **HEMISPHERE® SeMSy® Interface Module** provides an interface to external devices in a SeMSy® Security and Business Management System. The module receives data from external devices (e.g. cash register, access control, dealing shoe) via Ethernet and stores them in the integrated database. The received data can be processed and forwarded to various systems to trigger an action.

The HEMISPHERE® SeMSy® Interface Module offers an interface to connect different access control (AC) systems. Via Ethernet receives the Interface Module the data from external devices and stores them in the integrated data base. In addition, the data of the access control events are linked to the corresponding video data. The evaluation of the event and video data is made conveniently and clearly arranged with the provided applications (Inboxes, Interfaces Process client, video viewer on Surveillance tabs) on a HEMISPHERE® SeMSy® workstation.

Features

- Data base for access control data integrated
- Event and alarm processing at a HEMISPHERE® SeMSy® Workstation
- Event-triggered display of defined live camera (incl. PTZ preset)
- Support of the access of an operator to doors from a HEMISPHERE® SeMSy® Workstation (Lenel only)
- Reflection of the acknowledgement of alarms in the Dallmeier system in the OnGuard system (Lenel only)

Compatibility

- Gallagher
- CEM
- DSX
- Honeywell
- Lenel
- Maxxess
- Adjustments for further AC systems and versions optional
