

SeMSy® Dashboard Process

HEMISPHERE® SeMSy® Dashboard Process for the creation and visualization of reports, statistics and analyses on a HEMISPHERE® SeMSy® Workstation

The HEMISPHERE® SeMSy® Video Management System combines the proven concept of its predecessors with new dynamics and flexibility. The optimized license model with administration on the central HEMISPHERE® Backbone Server allows a simple, fast and secure adaptation and expansion of the entire system during operation.

Functionality

Dashboards allow operators to keep track of important data sources and events at all times: On a SeMSy® dashboard, system information and application data are clearly displayed in widgets. It also offers additional options such as app shortcuts and camera connections.

Presentation

The individual widget size depends on the selection of the widget layout (2 x 2, 3 x 2, etc.) and the resulting number of widgets to be displayed on a dashboard. A dashboard configuration is thus created specifically for the data and information to be displayed.

Data Visualization

The visualization of data takes place in diagram charts (line, column, pie charts). This can be defined individually for each data source.

Camera Splits

Camera splits have the full range of functions for live and playback operation like a split in a "Surveillance" tab.

Data Refresh

Widget data is updated automatically at adjustable intervals. In addition, a manual refresh can always be used.

Multiple Dashboard Processes

The process structure enables multiple dashboards to be viewed and used simultaneously on a single workstation.

Editor

An editor allows individual creation and configuration of dashboards.
