

SeMSy® Messenger Process

HEMISPHERE® SeMSy® Messenger Process for the distribution of messages and information via a chat between HEMISPHERE® SeMSy® Workstations

The HEMISPHERE® SeMSy® Video Management System combines the proven concept of its predecessors with new dynamics and flexibility. The optimized license model with administration on the central HEMISPHERE® Backbone Server allows a simple, fast and secure adaptation and expansion of the entire system during operation.

Function

The SeMSy® Messenger Process offers a chat function for sending text messages as well as the possibility to share content via SeMSy® links. This allows operators to quickly and easily exchange information with users on other workstations.

Text Messages

Operators of different workstations can communicate via text messages in chats at any time.

Make Content Available

Content (events) and cameras can easily be made available to users at other workstations via drag&drop. These are moved from the respective source applications ("Alarm-Inbox", "Event-Inbox", "Backup", "Navigator", "Surveillance" etc.) into the required chat and converted into a SeMSy® Link. By clicking on a SeMSy® Link, a recipient can then open the respective content in the corresponding application on his workstation.

Share Split Layouts

Single splits with active cameras or complete "Surveillance" tab layouts can also be shared with operators. The corresponding "SeMSy® Link" is simply posted in messenger chats and recipients activate the content immediately on their workstation.

Individual Chats And Group Communication

The Messenger app offers the possibility to chat directly with contacts or to create a group of any number of users. Memberships are managed by a group administrator.

Notifications

The application has an individually configurable notification system that can signal the receipt of a message through sound, desktop pop-ups and icon badges. In addition, messages in chats can be categorized in their importance by a colored criticality system.
