

SeMSy® Investigations Process

HEMISPHERE® SeMSy® Investigations Process for the extension of bookmarks to evidence files on a HEMISPHERE® SeMSy® Workstation

The HEMISPHERE® SeMSy® Video Management System combines the proven concept of its predecessors with new **dynamics and flexibility**. The optimized license model with administration on the central HEMISPHERE® Backbone Server allows a **simple, fast and secure adaptation and expansion** of the entire system during operation.

Function

The HEMISPHERE® SeMSy® Investigations Process enables an operator on a SeMSy® Workstation to extend a bookmark with special properties and to add it as an evidence file to an Incident from the Advanced Incident Management (AIM) Module.

Extended Bookmark Properties

The extension of bookmark properties is done in a corresponding dialog. In this dialog information (editor, officer ID, numbering, etc.) is added to a bookmark. For example, the numbering of a "Niche" incident recording system is also supported.

Track Recording around Bookmark

In addition to the image marker, a freely adjustable time span (standard 2.5 minutes each) before and after the bookmark time is saved in order to always record an incident comprehensively.

Overview List

All extended bookmarks can be retrieved in an overview on their own tab. An authorised representative can now evaluate the bookmark entries, extend or restrict track records, change information and finally decide whether the bookmark receives an Incident number and is assigned to an AIM Incident as evidence.
