

SeMSy® Configuration Application

HEMISPHERE® SeMSy® Configuration Application for the central settings management of a SeMSy® Video Management on a HEMISPHERE® SeMSy® Workstation

The HEMISPHERE® SeMSy® Video Management System combines the proven concept of its predecessors with new dynamics and flexibility. The optimized license model with administration on the central HEMISPHERE® Backbone Server allows a simple, fast and secure adaptation and expansion of the entire system during operation.

Function

The HEMISPHERE® SeMSy® Configuration Application is used for the comprehensive configuration of a SeMSy® Video Management. The application provides all tools and options for central settings management for cameras, recording systems, servers, video channels, workstations, user administration and rights management.

Spreadsheet Configuration

Cameras, recording systems, users and workstations can be added using spreadsheets. This configuration option via table structures allows devices to be configured with multiprocessing. This means, for example, automatic continuous naming of devices, setup of serial IP addresses over any number of lines or convenient rights configuration for multiple selections.

Copy & Paste

In addition, device and system information from external spreadsheet files can be used as a basis. Copy & Paste makes it easy to transfer settings and data for mass configuration of large systems.

Export Settings

All system settings and configuration data of, for example, recording systems, cameras, decoders, etc. can also be exported from a HEMISPHERE® SeMSy® Video Management into a spreadsheet file.

Licensing

The license for the HEMISPHERE® SeMSy® Configuration Application is included in the scope of delivery of the HEMISPHERE® SeMSy® Workstation Software.
