

SeMSy® CAD / DWG Map Extension

HEMISPHERE® SeMSy® CAD / DWG Map Extension for importing and using CAD files in SeMSy® Map on a HEMISPHERE® SeMSy® Workstation

The HEMISPHERE® SeMSy® Video Management System combines the proven concept of its predecessors with new **dynamics and flexibility**. The optimized license model with administration on the central HEMISPHERE® Backbone Server allows a **simple, fast and secure adaptation and expansion** of the entire system during operation.

Function

The HEMISPHERE® SeMSy® CAD / DWG Map Extension is an addition to the HEMISPHERE® SeMSy® Map Application. It allows the automatic import of layers which are available in a corresponding CAD file. Layers can be activated and deactivated individually, depending on which layer entities are to be mapped to GUI objects (e.g. cameras) in the map view.

CAD Layouts

Layouts defined in the CAD file (scaled views) can also be read out, edited and displayed in a map view.

Supported CAD Versions

The extension supports DWG files of all AutoCAD versions from release 2.50 up to and including 2018.

Support Rights System

The rights system of a SeMSy® Video Management can be applied to layers. In this way it can be exactly determined whether a user group may see all, only certain or no layers and the elements contained in them on the map or not.
