

SeMSy® Backup Application

HEMISPHERE® SeMSy® Backup Application for backup, archiving and export of recordings on a HEMISPHERE® SeMSy® Workstation

The HEMISPHERE® SeMSy® Video Management System combines the proven concept of its predecessors with new dynamics and flexibility. The optimized license model with administration on the central HEMISPHERE® Backbone Server allows a simple, fast and secure adaptation and expansion of the entire system during operation.

Function

The SeMSy® Backup Application is the central software for all recording backups of a SeMSy® Video Management. Backups can be created and executed via the corresponding application on a SeMSy® Workstation. Additional editing functions (copy, delete, etc.) are available for archive management.

Intuitive Operating

Backups of camera tracks can be made quickly at any time with intuitive drag & drop operation and standard operator parameters.

Commenting

Entering own comments is useful for adding descriptions or just key points to backups. These comments can then be searched and evaluated using a full text search.

Multi-Processing

Functional batch processing is available for recordings from different sources to create multiple backup files simultaneously. Date/time settings, comments and categorizations can be synchronized for this purpose.

Merging

Multiple individual backups can be merged into one backup (and thus into one file). Optionally, the original individual backups can also be saved in the archive after the operation.

Search Function

An extensive search function is available for the backup archive. In addition to a full text search, the archive selection can also be restricted by categories such as date/time, user, status, encoder devices or archive folders.

Replay Preview

Backups can be previewed in a video player.

Exporting

Backups can be exported to other storage media or burned to CD / DVD. The SMAVIA Viewing Client can also be integrated as a video player in a burning process.

AIM Incident

Backups can be directly linked to an incident number for the Alarm and Incident Management (AIM) System. In this way, a backup is automatically listed as evidence of the incident in AIM.

Licensing

The license for the HEMISPHERE® SeMSy® Backup Application is included in the scope of delivery of the HEMISPHERE® SeMSy® Workstation Software.
