

SeMSy® Notification Viewer Application

HEMISPHERE® SeMSy® Notification Viewer Application for the display of system messages and user actions at runtime on a HEMISPHERE® SeMSy® Workstation

The HEMISPHERE® SeMSy® Video Management System combines the proven concept of its predecessors with new dynamics and flexibility. The optimized license model with administration on the central HEMISPHERE® Backbone Server allows a simple, fast and secure adaptation and expansion of the entire system during operation.

Function

The HEMISPHERE® SeMSy® Notification Viewer Application lists system notifications and feedback about actions triggered by the user (snapshots, backups, etc.) in a chronological overview. Here, an operator can check the processing of his tasks or also re-examine error messages.

CSV Export

The list can be exported as a CSV file in order to evaluate it externally in a corresponding application or to archive the log file.

Only at Runtime

The list exists only during the runtime of the current user session on a HEMISPHERE® SeMSy® Workstation. If an operator logs off at a workstation, the list of the notification overview in the SeMSy® Notification Viewer Application is also deleted.

Licensing

The license for the HEMISPHERE® SeMSy® Notification Viewer Application is included in the scope of delivery of the HEMISPHERE® SeMSy® Workstation Software.
