

SeMSy® Dashboard Editor

HEMISPHERE® SeMSy® Dashboard Editor for configuring dashboards and widgets on a HEMISPHERE® SeMSy® Workstation

The HEMISPHERE® SeMSy® Video Management System combines the proven concept of its predecessors with new **dynamics and flexibility**. The optimized license model with administration on the central HEMISPHERE® Backbone Server allows a **simple, fast and secure adaptation and expansion** of the entire system during operation.

Function

The HEMISPHERE® SeMSy® Dashboard Editor is used to configure Dashboard content (widgets). In the editor, the individual widgets are placed on a dashboard layout and their settings are defined.

Dashboards

Dashboards can be customized with widgets. Due to the process structure of dashboards, several dashboards can be displayed simultaneously on one HEMISPHERE® SeMSy® Workstation.

Widgets

Widgets contain certain information or functions of applications and processes that are permanently displayed and continuously queried without the actual application having to be opened.

Statistical Evaluations

Evaluations of media events or gaming table statistics from casinos can be optimally displayed in diagrams (bar, line or circle diagrams). Query intervals and coloring, for example, can be individually configured for this purpose.

Cameras

Cameras can also be used as a widget to display their live stream on a dashboard.

Functions

Widgets are available for shortcuts or for mapping the camera tree.

Licensing

The license for the HEMISPHERE® SeMSy® Dashboard Editor is included in the scope of delivery of the HEMISPHERE® SeMSy® Dashboard Process.
