

SeMSy® Sequencer Editor

HEMISPHERE® SeMSy® Sequencer Editor for the creation of video sequences on a HEMISPHERE® SeMSy® Workstation

The HEMISPHERE® SeMSy® Video Management System combines the proven concept of its predecessors with new dynamics and flexibility. The optimized license model with administration on the central HEMISPHERE® Backbone Server allows a simple, fast and secure adaptation and expansion of the entire system during operation.

Function

The SeMSy® Sequencer Editor application enables the configuration and management of sequences on a HEMISPHERE® SeMSy® workstation. The sequences consist of different cameras, which are arranged in a certain order and are accordingly displayed in chronological order.

Configuration

Sequences are configured in three steps and displayed clearly on a timeline. These consist of individual tracks on which cameras are defined in a specific sequence using simple Drag & Drop. A time interval is set individually for each camera or a setting is applied to all cameras in a track. In addition, a specific split layout can also be defined for tracks for output.

Management

In the application, sequences and their tracks can be extensively edited, expanded, renamed or deleted. For example, a clone function makes it easier to quickly transfer entries (sequences, tracks).

Replay

Sequences are listed on a tab in the Navigator. From here they can be connected to the splits of a Surveillance process via Drag & Drop or double-click. In addition, it is always possible to activate only individual tracks of a sequence.

License

007361	DLD - HEMISPHERE® SeMSy® Sequencer Editor
	License for the use of the Sequencer Editor on one workstation (1x license for HEMISPHERE® Site Dongle)
