

PGuard advance

Evaluation and management software for messages (status, event, error)

PGuard advance is a central evaluation and management software for messages (status, event, error) from one or more Dallmeier recorders, decoders, streamers and MicroStreamers. With PGuard advance it is possible to display only certain messages of many different message types in a window and with an acoustic warning. Filter criteria, such as the time period or the recorders to be displayed, can also be selected.

PGuard advance can also be operated as a single-user solution in the server version. With several PGuard advance clients an extension to a multi-user solution in the LAN is possible at any time. In this case, server and clients access the server-side SQL database together and simultaneously. Processing status and data are updated in real-time.

The configuration of the entire system can be done centrally, quickly and easily. After configuring the server, all settings are transferred to the clients. Afterwards the settings of the individual clients can be adjusted individually (relevant recorders, priority of the messages, triggered actions, etc.).

Features

- Stand-alone or Server/Client Installation
- Recommended for up to 10 clients
- Integrated SQL database
- Recommended for up to 10,000 messages
- Central, fast and easy configuration
- Individual and versatile adaptation of the clients
- Recorder monitoring
- Client monitoring

System Requirements

- Windows 7 (32/64 Bit) or 10 (32 Bit) operating system
- Min. 850 MHz CPU
- Min. 128 MB working memory
- Min. 100 MB memory for client or server
- Min. 100 MB memory for 100,000 messages
- 100/1000 Mbps Ethernet interface
